Frontier Agentic AI for Insurance

Indemn

Indemn is a conversational AI platform for insurance. We build and deploy AI agents that handle quoting, customer service, sales, and underwriting support for insurance companies in production today. But our agents don't stop at conversation — they operate enterprise software, evaluate their own performance, and improve continuously. End-to-end automation of how insurance businesses run.

55 active agents   **65** organizations   **2M+** messages processed   **143K** conversations handled

WHAT SETS US APART

Agents That Operate Software
AI agents that work inside legacy platforms like Applied Epic — completing renewals, processing applications, executing the manual workflows that consume agency staff today. Each run teaches the next.

AI That Evaluates AI
An autonomous system that understands what an agent is supposed to do, generates every scenario it might face, and runs the evaluation. Quality scales with the platform, not headcount.

Knows Why, Not Just What
Every conversation analyzed automatically. The system identifies the specific factors that predict whether a conversation succeeds or fails — so agents improve systematically, not by guessing.
